

**To our
valued
customers...**

BALLAST STAR, Inc. was established with the goal of providing environmentally safe, non-corrosive products as well as customized bulk service for the agricultural equipment industry.

We are an idea company, striving to develop new methods in purchasing, storing and dispensing non-toxic, biodegradable liquid solutions for the purpose of hydraflation. We are able to offer very competitive pricing, high quality service and flexibility due to our size and efficient operation.

Our company prides itself in providing its customers with premium bulk service and the finest quality dispensing equipment available today.

Sincerely,

James C. Nash
President & CEO

Why

At Ballast Star we strive to offer the best products and service to our customers. Previously, the only injectable ballast products available were expensive foams or corrosive calcium or magnesium chlorides. Now at Ballast Star we use a newly patented product called Rim Guard. Here's some reasons why we think Rim Guard is right for your company.

What is Rim Guard?

Designed as a tire ballast, Rim Guard reduces or eliminates rust to tire rims, valves, gauges, pumps and equipment. Rim Guard is...

- Non-corrosive to metal
- Will not freeze to at least 30 degrees below zero
- Environmentally safe and biodegradable
- Non-toxic to humans and animals
- Non-flammable
- Water soluble, allowing for ease of cleaning and no special waste disposal
